

DevMate AI

Your AI-Powered Developer Assistant – built with Flutter, Firebase, and Google Gemini to streamline every part of your development workflow.

The Problem

Tool Fragmentation

Developers juggle multiple apps for chat, code review, debugging, and documentation – constantly context-switching.

Prompt Fatigue

Generic AI chat forces you to write full prompts from scratch every single time – draining and repetitive.

Lost Answers

Hard to revisit past AI responses when you need them again – valuable insights just disappear.

The Solution

One App, Six Focused Tools

Chat, Code Review, Debug, Explain, README Generator, and Project Planner – all in one place.

Structured Input Forms

Guided forms replace freeform prompts – lower friction, faster results, zero blank-page anxiety.

Persistent History

Every answer synced to your account – revisit any conversation, any time, across devices.

Home Dashboard

Everything at a Glance

- Time-aware greeting and quick access to all AI tools
- Recent conversation preview – jump back into past work instantly
- One-tap "**New Chat**" entry point for open-ended questions

□ The dashboard is the mission control for your entire dev workflow.

AI Chat in Action

Real-Time Streaming

Responses from Google Gemini stream in live – no waiting for full generation to complete.

Beautiful Rendering

Markdown and syntax-highlighted code blocks render cleanly, making every answer easy to read and use.

Auto-Saved History

Every conversation is saved automatically – nothing gets lost between sessions.

Structured AI Tools

Each tool comes with a purpose-built input form – no prompt engineering required.

Code Review

Paste code, get quality feedback instantly.

Debug Code

Submit code + error description, get targeted fixes.

Explain Code

Understand unfamiliar logic step-by-step.

Generate README

Turn a project description into polished documentation.

Project Planner

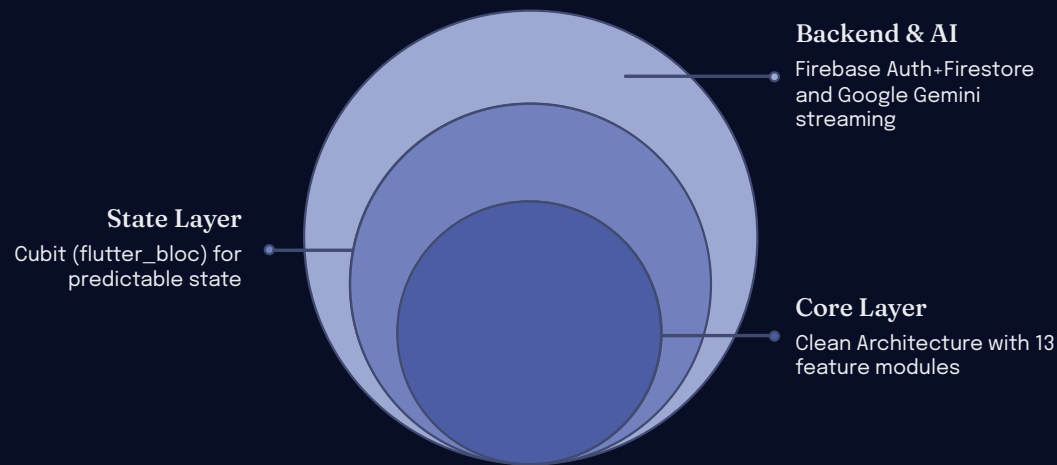

Scope a new project with guided form input.

Design System

- **Dual themes:** Dark and light modes – consistent, polished, and accessible throughout
- **Tool identity:** Accent-colored stat cards give each AI tool its own visual identity
- **Modern feel:** Rounded inputs and cards create a cohesive, contemporary interface
- **Localization:** Full English/Arabic support with RTL layout switching

Built on Production Architecture

Clean Architecture

13 independent modules, each with data, domain, and presentation layers.

State Management

Cubit (flutter_bloc) for predictable, testable state across all features.

Firebase Backend

Auth (email, Google, GitHub, guest) + Cloud Firestore for synced history.

Gemini AI

Google Gemini API with real-time response streaming.
